

FAJAR RAFSAN TANJUNG

Backend Developer — Java · Spring Boot · Microservices

fajar.rafsan02@gmail.com | 0812-8619-6886 | Bandung, Indonesia

<https://www.linkedin.com/in/fajar-rafsan-80822b394/> | <https://github.com/fajarrafsan>

Portfolio: <https://fajarrafsan.my.id/>

PROFESSIONAL PROFILE

Fresh Graduate in Accounting with more than 3 years of programming bootcamp training funded by a university scholarship, specializing in Backend Development with Java and Spring Boot. Experienced in designing REST APIs, JWT authentication with role-based access control, relational database schemas, and distributed microservices using Spring Cloud (Eureka & API Gateway), RabbitMQ messaging, and Redis caching. Comfortable across the full request lifecycle — from schema design and service-layer business logic to exception handling and API documentation with Swagger/OpenAPI. I also build production-grade frontends in React and TypeScript, which means every API I design has already been consumed by a client I wrote myself, and I can resolve integration issues end to end instead of handing them across a team boundary. My Accounting background contributes strong attention to detail, transactional reasoning, and a focus on data integrity — essential for precise relational design and backend business logic. Currently seeking an entry-level Backend Developer role in a collaborative engineering team.

TECHNICAL SKILLS

Core Backend: Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate ORM, Node.js, Express.js

Microservices & Distributed Systems: Spring Cloud (Eureka Service Discovery, API Gateway), Database-per-Service, RabbitMQ (asynchronous messaging), Redis (caching), WebSocket

API & Security: REST API Design, JWT Authentication, Role-Based Access Control, Payment Gateway Integration, Swagger/OpenAPI, Postman, API Testing, JSON

Database: MySQL, PostgreSQL, Relational Schema Design, Normalization, Query Optimization, Transaction & Data Integrity

Architecture & Principles: OOP, SOLID, MVC, Dependency Injection, Service Layer, Repository Pattern, Exception Handling, Clean Code

Frontend (Supporting Strength): React.js, TypeScript, JavaScript, Tailwind CSS, Thymeleaf, HTML5, Responsive Design — sufficient to build and integrate complete client applications against my own APIs

Tools & Workflow: Git, GitHub, Git Flow, Maven, Unit Testing, Vercel

Fundamentals: Algorithms, Data Structures, Database Fundamentals, C

Languages: Indonesian (Native), English (Basic)

FEATURED PROJECTS

RoomlyHotel — Hotel Booking Platform (Microservices)

2026

Java · Spring Boot · Spring Cloud · MySQL · RabbitMQ · Redis · JWT · React.js

Frontend: <https://github.com/fajarrafsan/RoomlyHotel> **Backend:** <https://github.com/fajarrafsan/REST-API-Hotel-Booking>

- Architected a distributed microservices backend using Spring Cloud, with Eureka for service discovery and an API Gateway for centralized request routing; developed 20+ REST endpoints covering room inventory management, image upload, room-type assignment, and real-time availability tracking.
- Implemented stateless JWT authentication and Role-Based Access Control (Admin & Guest) with Spring Security across services, together with centralized exception handling and consistent API response contracts.
- Integrated RabbitMQ for asynchronous booking notifications so the booking response is not blocked by notification delivery, and Redis caching on room-availability queries to cut repeated database hits on the hottest read path.
- Designed an isolated relational database per microservice (database-per-service) and integrated a Payment Gateway to process real-time financial transactions under strict data-integrity constraints.
- Also built the React.js and Tailwind CSS client that consumes these services through the API Gateway — validating the API contracts against a real consumer.

AniStream — Media Content Platform

2026

Node.js · Express.js · MySQL · REST API · JWT · React.js · Tailwind CSS

Demo: <https://anistreasm-fe-nine.vercel.app/> **Frontend:** <https://github.com/fajarrafsan/ANISTREAM-FE> **Backend:** <https://github.com/fajarrafsan/REST-API-ANISTREAM-BE>

- Engineered the REST API layer with Node.js and Express.js, handling JWT authentication, protected route middleware, and core media content management (CRUD for content, metadata, and user interaction records).
- Designed an optimized relational schema managing user profiles, content metadata, and interaction histories, with indexed lookups on the most frequently queried relations.
- Structured the service into clear controller, service, and data-access layers with centralized error handling, keeping business logic independent of the HTTP layer.
- Deployed the platform end to end and built the React.js frontend that consumes the API, confirming the contract works for a real client.

GlowMarket — E-Commerce Platform

2025

Java · Spring Boot · MySQL · REST API · JWT · React.js · Tailwind CSS

Demo: <https://projek-react.vercel.app/> Frontend: <https://github.com/fajarrafsan/GLOWMARKET> Backend: <https://github.com/fajarrafsan/REST-API-GLOWMARKET>

- Built secure REST APIs with Java Spring Boot for a decoupled e-commerce architecture, implementing JWT authentication and role-based access control (Admin & Customer).
- Implemented full CRUD operations for product catalogs, category management, and cart workflows, with server-side validation and consistent error responses.
- Designed a relational schema maintaining transactional data integrity across user profiles, product inventories, and customer order records.

SIA — Accounting Information System

2024

Java · Spring Boot · Spring Security · MySQL · Thymeleaf

Demo: <https://sia-sistem-informasi-akuntansi.onrender.com/> Repository: https://github.com/fajarrafsan/SIA-SISTEM_INFORMASI_AKUNTANSI

- Developed a comprehensive Accounting Information System to digitize financial records, leveraging a strong Accounting background to implement accurate double-entry business logic and ledger structures.
- Secured the application with Spring Security and served the interface through Spring MVC with Thymeleaf templates.

FRONTEND CAPABILITY — SUPPORTING STRENGTH

- Built and shipped the complete React.js and Tailwind CSS frontends for RoomlyHotel, AniStream, and GlowMarket. Every backend API in this CV has been consumed by a production-style client application that I wrote myself.
- Working knowledge of TypeScript, component-based architecture, React state and data-fetching patterns, JWT-protected routing, role-conditional rendering, form validation, and responsive layouts with Tailwind CSS; also server-rendered views with Thymeleaf.
- Practical value to a backend team: I design API contracts, error payloads, and pagination shapes that client developers can consume without rework, I can read a frontend issue report and tell quickly whether the defect is server-side or client-side, and I can verify an endpoint against a real UI rather than only against Postman.

PROFESSIONAL EXPERIENCE

Java Programming Instructor · Universitas Nasional Pasim · Bandung

Sep 2025 – Dec 2025

- Instructed a Java programming bootcamp for 30+ university students, delivering comprehensive modules covering Java Fundamentals, Object-Oriented Programming (OOP), and Web MVC architecture.
- Mentored students through a structured learning path — from conceptual lectures and periodic quizzes to hands-on guidance in building functional web applications using Spring Boot and Thymeleaf.
- Evaluated technical proficiency by assessing students' final projects through comprehensive presentation sessions and code reviews.

Accounting Teaching Assistant · Universitas Nasional Pasim · Bandung

Sep 2024 – Jun 2026

- Assisted professors in facilitating accounting courses, guiding students through complex financial concepts, ledger structuring, and transactional logic.
- Evaluated student assignments and examinations with high attention to detail, ensuring accuracy in financial data processing and calculations.
- Mentored students in understanding fundamental accounting principles, strengthening technical communication and problem-solving skills.

EDUCATION

S1 Akuntansi (Bachelor of Accounting) · Universitas Nasional Pasim · Bandung

2023 – 2026 (Expected)

GPA: 3.64 / 4.00 · Recipient of Full PUB Scholarship 2023–2026

An Accounting background provides a strong foundation in transactional logic, high attention to detail, and data integrity — directly transferable to relational database design, secure backend systems, and precise business-logic implementation.

ACHIEVEMENTS & RECOGNITION

- Recipient of Full PUB Scholarship — selected through a competitive national scholarship screening process, funding 3+ years of programming bootcamp training alongside the Accounting degree.
- Academic Instructor & Teaching Assistant — entrusted by the university to facilitate Accounting lectures and to mentor 30+ students through a Java programming bootcamp.
- Portfolio: <https://fajarrafsan.my.id/> — showcasing end-to-end projects across backend APIs & microservices, frontend development, and full-stack applications.
