

FAJAR RAFSAN TANJUNG

Backend Developer — Java 21 • Spring Boot • Event-Driven Microservices

fajar.rafsan02@gmail.com | +62 812-8619-6886 | Bandung, Indonesia — open to Jakarta relocation, available immediately
linkedin.com/in/fajar-rafsan-80822b394 | github.com/fajarrafsan | Portfolio: fajarrafsan.my.id

12-service event-driven platform • 82+ REST endpoints in a single API • 150+ automated tests • double-entry accounting engine written in code • 7 end-to-end systems, all public on GitHub

PROFESSIONAL SUMMARY

Backend developer with an Accounting degree background from Universitas Nasional Pasim Bandung. Holds a GPA of 3.64, a full PUB scholarship, and nine programming training certificates. Skilled in **Java and Spring Boot**, with PostgreSQL and MySQL databases. Experienced in building REST APIs from scratch, covering database design, JWT authentication, and Midtrans and Xendit payment integration. Has completed seven systems, all publicly viewable on GitHub. Has taught since 2025 as a Java instructor and an Accounting teaching assistant. Careful with numbers and data flows, coming from an Accounting background.

TECHNICAL SKILLS

Core — used across multiple shipped systems: Java 21, Spring Boot, Spring Security, Spring Data JPA / Hibernate, PostgreSQL, MySQL, SQL, REST API design, JWT & role-based access control, Git / GitHub

Applied in the projects below: Spring Cloud (Eureka, API Gateway, OpenFeign), RabbitMQ, Redis, Docker & Docker Compose, Flyway, Node.js & Express 5, Prisma ORM, WebSocket/STOMP, JUnit 5 & Mockito, Jest / Vitest, Google OAuth2, Argon2 / BCrypt, Midtrans, Xendit, Cloudinary, Apache POI, iText / OpenPDF, OpenAPI/Swagger, Maven, Postman

Working familiarity: Quartz scheduling, Bucket4j rate limiting, ZXing, RajaOngkir, Spring Actuator, Thymeleaf, C, Vercel

Frontend (supporting): React 19, TypeScript, Tailwind CSS 4, Vite — I build and integrate the clients that consume my own APIs

Spoken Languages: Indonesian (native) • English (technical reading & writing — documentation, specifications, code review)

FEATURED PROJECTS

Roomly — Hotel Booking Platform (Event-Driven Microservices) 2026

Java 21 • Spring Boot 3.5 • Spring Cloud • PostgreSQL 16 • Redis 7 • RabbitMQ • Docker Compose • Midtrans • React 19 • TypeScript

Backend: github.com/fajarrafsan/REST-API-Hotel-Booking • Frontend: github.com/fajarrafsan/RoomlyHotel

- Built **12 Spring Cloud microservices** — Eureka discovery, API Gateway, OpenFeign — running with PostgreSQL, Redis and RabbitMQ from one docker-compose.
- Made it **event-driven**: domain events reach RabbitMQ only after the database commits, so booking responses never wait on invoices or notifications.
- Verified Midtrans webhooks by **HMAC SHA-512**, revalidating amount, currency and ownership server-side; refunds stay idempotent through row-level locks.

GlowMarket — Gold Jewellery E-Commerce with a Built-In Accounting Engine 2026

Java 21 • Spring Boot 4 • PostgreSQL • Flyway • Xendit • RajaOngkir • WebSocket/STOMP • Cloudinary • React 19 • Vite 7 • Tailwind 4

Backend: github.com/fajarrafsan/REST-API-GLOWMARKET • Frontend: github.com/fajarrafsan/GLOWMARKET • Demo: projek-react.vercel.app

- Delivered **82+ REST endpoints** across 10 business domains — products, orders, payments, chat, accounting, loyalty, returns, shipping, notifications, analytics.
- Built a **double-entry accounting engine** into the commerce flow: every sale, refund and stock adjustment posts balanced journal entries, exposed as ledger, trial balance and P&L endpoints. My Accounting degree, applied in code.
- Integrated Xendit with a **10-minute reconciliation job** that recovers dropped webhooks; a confirmed payment posts journals and awards loyalty points atomically.

TiketKilat — Flight Booking & E-Ticketing Platform

2026

Java 21 · Spring Boot 3.4 · PostgreSQL · Spring Security · Midtrans Snap · iText + ZXing · Apache POI · React 19 · TypeScript 5.9 · Tailwind 4

Backend: github.com/fajarrafsan/TiketKilatBE · Frontend: github.com/fajarrafsan/TiketKilatFE

- Built the full booking flow: flight search → passenger data with ID upload → Midtrans Snap payment → seat selection → **QR-coded PDF e-ticket** by email.
- Took payment status **only from signature-verified webhooks**, cross-checked on ownership, nominal, currency and fraud status — never from the browser redirect.
- Automated the lifecycle with scheduled jobs: a **15-minute payment deadline**, OTP and token expiry, flight status and seat-availability sync.

AniStream — Streaming Platform with Dual-Source Catalogue Aggregation

2026

Node.js (ESM) · Express 5 · Prisma 6 · PostgreSQL 15 · Redis 7 · Google OAuth2 · Argon2 · Cloudinary · Jest · React 19 · Vite 8

Demo: anistream-fe-nine.vercel.app · Backend: github.com/fajarrafsan/REST-API-ANISTREAM-BE · Frontend: github.com/fajarrafsan/ANISTREAM-FE

- Structured **~35 endpoints** through a route → controller → service → repository → mapper pipeline, with Joi validation and Winston logging.
- Wrote a **6-tier title-matching algorithm** (exact through Dice coefficient) to reconcile two upstream catalogues that name the same records differently.

ADDITIONAL PROJECTS

SIA — Accounting Information System — 2024 · Java · Spring Boot · Spring Security · MySQL · Thymeleaf | Digitised financial record-keeping with a chart of accounts, journals, general ledger and financial statements on correct double-entry logic drawn from my Accounting coursework; secured with Spring Security, served through Spring MVC and Thymeleaf. · sia-sistem-informasi-akuntansi.onrender.com · github.com/fajarrafsan/SIA-SISTEM_INFORMASI_AKUNTANSI

FRONTEND CAPABILITY — SUPPORTING STRENGTH

- I wrote the client for every API in this CV — a React 19 commerce console of 27 routes and 316 components, and a hotel dashboard responsive from 320px to 1800px+. No API here is theoretical.
- Value to a backend team: I design API contracts, error payloads and pagination shapes client developers can consume without rework, and I can tell quickly whether a bug is server-side or client-side.

EXPERIENCE

Java Fundamentals Instructor

Sep 2025 – Present

Program Beasiswa PUB · Universitas Nasional Pasim

- Officially appointed to lead a Java fundamentals class of 5 students, from basic logic through to Web MVC architecture, assessed by final project and **code review**.

C Programming Mentor

Sep 2026 – Present

Program Beasiswa PUB · Universitas Nasional Pasim

- Mentor scholarship participants through C fundamentals — pointers, manual memory handling, structs and file I/O.

Accounting Teaching Assistant

Sep 2025 – Aug 2026

Universitas Nasional Pasim

- Ran tutorial classes for Introductory Accounting I & II and Public Sector Accounting across **30 students**; set and marked weekly quizzes — work where an arithmetic slip is a failure, not a rounding difference.

EDUCATION

Bachelor of Accounting (S1 Akuntansi)

2023 – 2026 (Expected)

Universitas Nasional Pasim · Bandung

GPA 3.64 / 4.00 · Full PUB Scholarship recipient (competitive national screening), 2023–2026

CERTIFICATIONS & TRAINING

Nine Certificates of Appreciation from Program Beasiswa PUB (2023–2026) — from Logic and Algorithm through to Advanced Front-End Programming (React), Jul 2026
