

# FAJAR RAFSAN TANJUNG

## Frontend Developer

fajar.rafsan02@gmail.com | +62 812-8619-6886 | Bandung, Indonesia  
linkedin.com/in/fajar-rafsan-80822b394 | github.com/fajarrafsan | Portfolio: fajarrafsan.my.id

### PROFESSIONAL PROFILE

**Frontend Developer** with **3+ years of hands-on experience** in frontend and backend development through an intensive scholarship program, personal projects, and teaching. Builds responsive, user-friendly web interfaces with **React, TypeScript, and Tailwind CSS**. Has built **four complete web apps**, including an online store with an admin dashboard, hotel booking, flight ticketing, and streaming. Makes pages look right on phones, tablets, and wide desktop screens. Writes reusable components and tested code that other developers can easily continue. Pays attention to details such as loading, empty, and error states, so users always know what is happening. Works independently from building pages and connecting APIs to deploying on Vercel. Also builds backends in Java Spring Boot and Node.js, so working with backend teams is smooth. Taught Java and C to other students, so explains technical ideas clearly. **Fresh graduate in Accounting (GPA 3.64)**, careful with prices, totals, and other figures on screen.

### TECHNICAL SKILLS

**React & TypeScript:** React 19, TypeScript 5.9, JavaScript (ES6+), React Router 7, custom hooks, Context API — used in **4 complete web apps**

**UI & Styling:** HTML5, CSS3, Tailwind CSS 4, shadcn/ui, responsive design (320px–1800px+), reusable form/table/modal components, loading skeletons, Framer Motion, dark/light theme, bilingual UI (ID/EN), Lucide icons, accessible markup (ARIA)

**API Integration & Auth:** REST APIs with Axios interceptors, JWT login with silent token refresh, Google Sign-In, protected routes, role-based pages (user/admin), payment flows (Midtrans Snap, Xendit), loading / empty / error states

**Real-Time & Data Visualisation:** Live chat and notifications over WebSocket (STOMP/SockJS, reconnect, heartbeat), presence indicators, Recharts, Chart.js, PDF export (jsPDF + html2canvas)

**Testing & Quality:** Vitest, React Testing Library, Node Test Runner — **76 automated tests on one project**, ESLint, Oxlint / Oxfmt

**Tools & Deployment:** Git, GitHub, Vercel, Vite build pipeline, npm/pnpm, Docker, Docker Compose, Postman, environment configuration, SEO basics (sitemap, robots.txt)

**Backend (supporting):** Java 21, Spring Boot, Spring Security, Node.js, Express 5, Golang, REST API design, PostgreSQL, MySQL, Redis, Prisma, Thymeleaf — **builds the APIs these interfaces consume**

**Fundamentals:** OOP, SOLID, clean code, algorithms, data structures, C, Python (basic)

**Languages:** Indonesian (native) · English (technical reading & writing)

### FEATURED PROJECTS

#### GlowMarket — Gold Jewellery E-Commerce with a Built-In Accounting Engine

Sep 2025

Java 21 · Spring Boot 4 · PostgreSQL · Flyway · Xendit · RajaOngkir · WebSocket/STOMP · Cloudinary · React 19 · Vite 7 · Tailwind 4 | **Backend:** [github.com/fajarrafsan/REST-API-GLOWMARKET](https://github.com/fajarrafsan/REST-API-GLOWMARKET) · **Frontend:** [github.com/fajarrafsan/GLOWMARKET](https://github.com/fajarrafsan/GLOWMARKET) · **Demo:** [projek-react.vercel.app](https://projek-react.vercel.app)

- Built a storefront and admin console of **27 routes, 350 component files and 42 custom hooks** — logic in hooks, components kept presentational.
- Wired the real-time layer over STOMP/SockJS through **4 dedicated hooks** with reconnect, heartbeat and re-subscribe on tab focus, driving chat, notifications and presence.
- Shipped a **4-step checkout** (address → courier → voucher → payment) with Xendit and status polling; the client never computes a financial value.
- Handled **three login flows** — email OTP, admin double OTP, Google Identity — on httpOnly-cookie JWT with silent 401 refresh.

#### Roomly — Hotel Booking Platform (Event-Driven Microservices)

Jul 2026

Java 21 · Spring Boot 3.5 · Spring Cloud · PostgreSQL 16 · Redis 7 · RabbitMQ · Docker Compose · Midtrans · React 19 · TypeScript | **Backend:** [github.com/fajarrafsan/REST-API-Hotel-Booking](https://github.com/fajarrafsan/REST-API-Hotel-Booking) · **Frontend:** [github.com/fajarrafsan/RoomlyHotel](https://github.com/fajarrafsan/RoomlyHotel)

- Built a React 19 + TypeScript dashboard of **17 routes and 63 component files**, split into separate Guest and Admin portals.
- Made it work from **320px** phones to **1800px+** ultra-wide — hamburger nav at the low end, 5-column grids in a capped container at the top.
- Shipped a one-click bilingual (ID/EN) interface across all **17 routes**, with Recharts spending analytics and restrained Framer Motion transitions.

#### TiketKilat — Flight Booking & E-Ticketing Platform

Jul 2025

Java 21 · Spring Boot 3.4 · PostgreSQL · Spring Security · Midtrans Snap · iText · ZXing · Apache POI · React 19 · TypeScript 5.9 · Tailwind 4 | **Backend:** [github.com/fajarrafsan/TiketKilatBE](https://github.com/fajarrafsan/TiketKilatBE) · **Frontend:** [github.com/fajarrafsan/TiketKilatFE](https://github.com/fajarrafsan/TiketKilatFE)

- Built the booking interface across **14 route pages** in React 19 + TypeScript 5.9 + Tailwind 4, backed by **76 automated tests in 6 suites**.
- Kept the Midtrans Snap popup in-page, polling status **every 8 seconds** with order-ID recovery so an interrupted payment resumes instead of restarting.
- Wrote an API client with automatic Bearer injection and silent 401 refresh, plus separate route guards for USER and ADMIN across **3 admin routes**.

#### AniStream — Streaming Platform with Dual-Source Catalogue Aggregation

Mar 2026

Node.js (ESM) · Express 5 · Prisma 6 · PostgreSQL 15 · Redis 7 · Google OAuth2 · Argon2 · Cloudinary · React 19 · Vite 8 | **Demo:** [anistream-fe-nine.vercel.app](https://anistream-fe-nine.vercel.app) · **Backend:** [github.com/fajarrafsan/REST-API-ANISTREAM-BE](https://github.com/fajarrafsan/REST-API-ANISTREAM-BE) · **Frontend:** [github.com/fajarrafsan/ANISTREAM-FE](https://github.com/fajarrafsan/ANISTREAM-FE)

- Built the streaming UI in React 19 + Vite 8: **12 routes** (7 auth-guarded), **99 components** with 26 loading skeletons, **44 custom hooks** and 6 context providers.
- Implemented a multi-server video player with source switching, plus **3 per-user features** — watch history, wishlist and search history.

- Routed all data access through one Axios instance with interceptors across **5 API modules** rather than scattering fetch calls; added dark/light theming and Google OAuth sign-in.

**ARUNIKA — Specialty Coffee Landing Page** — 2026 · *HTML5 · CSS3 · Vanilla JavaScript · Vercel* | A framework-free landing page with product filtering, 3D tilt card effects and bean-to-cup storytelling, fully responsive from 320px — layout and interaction built without reaching for React. · [arunika-livid.vercel.app](https://arunika-livid.vercel.app) · [github.com/fajarrafsan/ARUNIKA](https://github.com/fajarrafsan/ARUNIKA)

**SIA — Accounting Information System** — Jan 2025 · *Java · Spring Boot · Spring Security · MySQL · Thymeleaf* | Digitised financial record-keeping across **10 entities and 45 endpoints in 9 controllers**, with a chart of accounts, journals, general ledger and financial statements on correct double-entry logic drawn from my Accounting coursework; secured with Spring Security and served through **26 Spring MVC + Thymeleaf views**. · [sia-sistem-informasi-akuntansi.onrender.com](https://sia-sistem-informasi-akuntansi.onrender.com) · [github.com/fajarrafsan/SIA-SISTEM\\_INFORMASI\\_AKUNTANSI](https://github.com/fajarrafsan/SIA-SISTEM_INFORMASI_AKUNTANSI)

**SHOPIFY — Console Store System in C** — Dec 2023 · *C · No framework* | A retail store system written entirely in C with no framework — **4,771 lines across 127 functions, 26 menu options over 9 arrow-key screens**, with every record persisted to **11 delimited text files** through raw file I/O. The fundamentals layer beneath everything above it: data handling, program flow and persistence done by hand rather than by an abstraction. · [github.com/fajarrafsan/Shopify-Console-C](https://github.com/fajarrafsan/Shopify-Console-C)

## BACKEND CAPABILITY — SUPPORTING STRENGTH

---

- Designed and built the API behind every interface in this CV — Spring Boot for Roomly, GlowMarket and TiketKilat, Node.js/Express for AniStream — with JWT and OAuth2 auth, RBAC, payment webhooks and full business logic. GlowMarket's API alone runs to **142 endpoints across 24 domains with 78 unit tests**.
- Reads an API spec without hand-holding, proposes contract changes in terms a backend engineer will accept, and can extend or stub an endpoint directly instead of waiting for it.

## PROFESSIONAL EXPERIENCE

---

### Java Fundamentals Instructor

Sep 2025 – Dec 2025

Program Beasiswa PUB · Universitas Nasional Pasim · Bandung

- Officially appointed to lead a Java fundamentals class of **5 students** over **4 months**, delivering the full path from basic logic and control structures through object-oriented programming to Web MVC architecture.
- Took all 5 from lectures and quizzes to a working Spring Boot and Thymeleaf web application, assessed across **3 components** — final project, presentation and code review.

### C Programming Mentor

Sep 2024 – Mar 2025

Program Beasiswa PUB · Universitas Nasional Pasim · Bandung

- Mentored PUB scholarship participants in C fundamentals over **7 months**, covering **5 core areas**: pointers, manual memory management, arrays and structs, control flow, and file I/O.

### Accounting Teaching Assistant

Sep 2024 – Jun 2026

Universitas Nasional Pasim · Bandung

- Trusted by the lecturer to run tutorial and problem-session classes for **3 courses** — Introductory Accounting I & II and Public Sector Accounting — across **30 students**, preparing supplementary material, working through case studies, and setting, distributing and marking weekly quizzes.
- Marked **weekly quizzes**, assignments and examinations for all 30 students under strict accuracy requirements, and held out-of-hours consultation sessions for students needing additional support.

## EDUCATION

---

### Bachelor of Accounting (S1 Akuntansi)

2023 – 2026

Universitas Nasional Pasim · Bandung

**GPA 3.64 / 4.00 · Full PUB Scholarship recipient (competitive national screening), 2023–2026**

Double-entry logic, ledger structure and audit trails are not abstractions I had to look up — they show up directly in GlowMarket's accounting engine and in SIA.

## CERTIFICATIONS & TRAINING

---

**Program Beasiswa PUB (Certificate of Appreciation):** Advanced Front-End (React), Jul 2026 · Fundamental Front-End (React), Jan 2026 · Advanced Back-End (Java), May 2025 · Fundamental Back-End (Java), May 2025 · GitHub, May 2025 · HTML, May 2025 · Data Structure, Jun 2024 · Database, Jun 2024 · Logic and Algorithm, Sep 2023

## ACHIEVEMENTS & RECOGNITION

---

- **Full PUB Scholarship** — selected through competitive national screening; funded 3+ years of programming bootcamp training (9 stages, 16 sessions each) alongside the Accounting degree, assessed by quizzes, handwritten coding midterms with no computer, and a built project as the final exam.
- **Trusted to teach two languages by the university** — Java Fundamentals Instructor (Sep–Dec 2025) and C Programming Mentor (Sep 2024–Mar 2025) at Program Beasiswa PUB, alongside an Accounting Teaching Assistant appointment covering 30 students across three courses.
- **Portfolio:** <https://fajarrafsan.my.id/> · **GitHub:** <https://github.com/fajarrafsan> — **9 end-to-end systems**, all public, documented, and runnable.
